

Sandata Aggregator

21st Century Cures Compliant

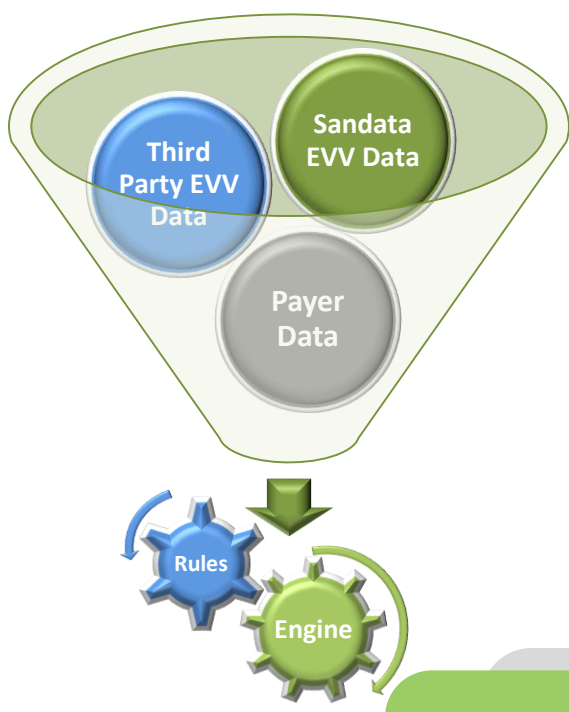

Supports EVV Vendor Neutrality

Sandata recommends an Open Electronic Visit Verification (“EVV”) Model that allows providers who have already invested in EVV to continue to use their own EVV systems. Sandata Aggregator supports this progressive model by consolidating all EVV data into a single environment for effective program oversight. Sandata Aggregator eliminates common challenges to EVV programs by allowing providers to select and pay for the EVV vendor that works best for their business, while ensuring the payer is 100% compliant with the 21st Century Cures Act.

With Sandata Aggregator:

- Payers have control over program rules, maximum visibility and oversight;
- Providers have maximum flexibility to use systems that meet their needs; and
- Participants are engaged and care is optimized.

Sandata Aggregator Overview

Sandata Aggregator integrates data across all vendors into a powerful, holistic system. We support multiple verification methods including telephony, mobile visit verification (GPS), and device options.

Providers choose to use their own EVV system or to use the payer EVV system. Sandata Aggregator normalizes data across all EVV vendors, and provides real time alerts for late or missed visits, ensuring quality care deliver and visibility.

Sandata Aggregator is a repository for all EVV data, giving payers a uniform set of network rules, data and reporting. Dashboards, alerts and reporting help the payer manage provider compliance and ensure care delivery.

Sandata Aggregator supports claims integration and claims auditing, allowing payers to connect adjudication to visit verification data in real time.

With Sandata, you are partnering with a home care thought leader with 40 years of experience operating EVV programs nationally. Our solutions create a “connected home health network” which maximizes the effectiveness of the Medicaid program; maximizes the efficiency of home care providers by reducing manual paperwork; ensures 21st Century Cures Compliance; and improves service delivery and reduces fraud by providing oversight and reporting.
